Dear sirs/madams:

It is my great pleasure to apply for this Bioinformatics scientist position at Celmatix

I came across with this opening from Dr. Pavithra Shivakumarmy who shares the same group on LinkedIn network. I am very excited to see such a job posting, as nowadays, one can hardly find a bioinformatics position for biomarkers related project.

I have been in the bioinformatics field for more than 10 years and my early experiences were in microarray and genome informatics. I became interested in the application of gene profiling and later biomarker searching since 2000/1 when I first heard Dr. Joel Nevins' presentation on his "successful" predication model.

A few friends/colleagues and I became actively involved in "biomarker" searching field, with a hope to find some "significant" biomarkers that can be used in clinical diagnosis. We knew the potential but we were just not lucky to find that needle in the haystack. While I was working at NIEHS, we joined FDA-led MAQC phase II consortium research with a goal to evaluate consistency of statistical models used in phynotypic outcomes. All in all, I am very interested/experienced in such data mining activity; honestly speaking, I am delighted to see a successful model like Celmatix.

Another attraction that gets me to apply is the excitement about a small startup company. I wish the best luck to Celmatix and hopefully I can be benefitted from it if I can join this company. My C.V. should tell more about my background and experiences, and I am confident that you will find good matched skill set I possess which will definitely make me a good candidate from the application pool

Your attention to my application will be highly respected and I am looking forward to hearing from you further.

Sincerely,

Jianying Li
